Hackathon

Seguridad Inteligente para una
Energía en Movimiento

moeve

We are transforming our businesses to become leaders in sustainable mobility and energy in Spain and Portugal

Commercial & Clean Energies

We are transforming our company to lead in sustainable energy, become climate neutral before 2050 and create value for a brighter future.

Energy Parks

We are advancing in the transformation of our refineries into diversified Energy Parks, where we apply innovation and sustainability to develop new green products.

Mobility & New Commerce

We develop solutions that allow us to move towards decarbonization to build a better future.

Chemicals

Trading

E&P

Positive Motion: Up to €8 billion of investment until 2030 to advance green H2, 2nd gen biofuels, and sustainable mobility projects in Iberia

Green hydrogen, a driver of descarbonization

We drive the green hydrogen business to accelerate Europe's energy transition.

Biofuels

We are working to lead the production of biofuels in Spain and Portugal by 2030.

Moving towards a more sustainable chemistry

We innovate and develop chemical products for a better future.

Sustainable mobility

We develop solutions that allow us to move towards decarbonization to build a better future.

This is how Positive Motion is moving along

Since we presented our "Positive Motion" strategy in march 2022, we have taken big steps such as the sale of more than 70% of our petroleum producing assets or the signing of strategic alliances to accelerate the development of major transformation projects.

01

Andalusian Green Hydrogen Valley

- Development of the largest project unveiled to date in Europe, which will have a capacity of 2000 MW in 2030.
- Creation of the first maritime corridor between the ports of Algeciras and Huelva and the port of Rotterdam
- Development of new green methanol and ammonia plants with its partners.

02

The largets 2G biofuels plant in southern Europe

- Development of what will become the largest 2G biofuels plant in southern Europe, located in Palos de la Frontera (Huelva) 1Mt SAF and HVO annually.
- Marketing sustainable fuels at seven major Spanish airports and at the more than 60 ports where it operates in the country.

03

160 operational ultra-fast charging points network

- +400 installed, as part of the development of one of the largest ultra-fast electric charging networks in Spain and Portugal.
- Transformation of its customer touchpoints, broadening its offering of alternative energies, as well as new food, parcel pick-up and shopping services.

04

Transformation of chemical portofolio towards more sustainable solutions

- It already produces and markets LAB (raw material for the manufacture of biodegradable detergents) and phenol from renewable raw materials and energy sources
- Building an isopropyl alcohol (IPA) plant in Huelva, the first facility of its kind in Spain that uses green hydrogen.

05

Cepsa becomes Moeve

This change marks a historic milestone in the company's tranformation, positioning Moeve as a leader in the European energy transition, and also aligns with the company's objective to accelerate its own decarbonization, alongside that of its customers.
